

Bullnose

Protects your racks against forklift impacts

Bullnose pallet rack protectors are designed to shield the most impact-prone section of pallet rack uprights—the lower few inches where forklift contact is most common.

Their rounded, reinforced profile deflects and absorbs impact, preventing damage that can compromise rack stability and lead to costly repairs or replacements.

Specifications

Height: 4in

Width: 4in

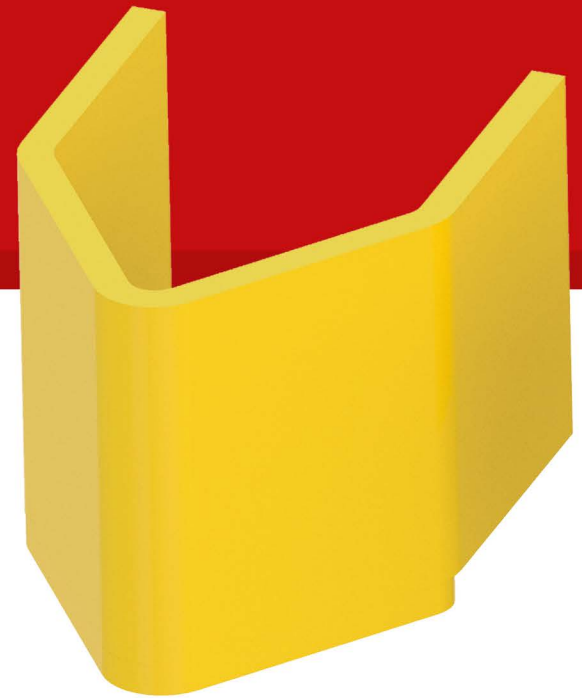

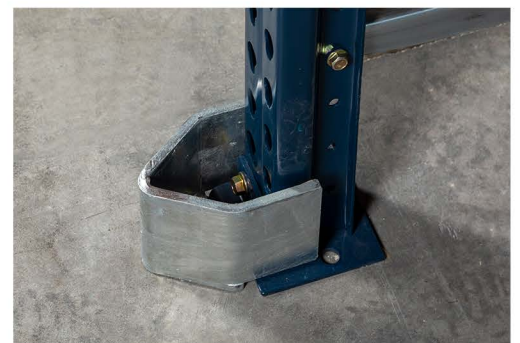

Thickness: 5/16

Anchor hole inside to secure to floor.

Requires a 5/8" x 5" wedge anchor for installation.

Also available in Hot-Dip Galvanized finish, ideal for cold and outdoor storage

Key Features

- **Heavy-duty steel construction**
Built to withstand repeated forklift and pallet jack impacts in high traffic aisles.
- **Rounded bullnose design**
Disperses force on contact, reducing the likelihood of dents, bends, or cracks in the upright.
- **High-visibility finish**
Bright, durable coating enhances visibility and helps operators avoid accidental contact.
